PROFILE

Full Stack MERN developer at **Anuubis Solutions**, where I keep a fleet of close to a thousand sites across eight servers running: deploys, migrations between hosting providers, audits and production incidents. Most of it scripted, because at that size doing it by hand is how sites go down. I integrate language models into product — Gemini for video analysis in Strev, Claude for text generation in Atalaya— and orchestrate agents inside my own projects. Higher vocational training in Web Application Development completed in 2026. Linux-native, backend-first.

TECH STACK

- **Frontend** — React (Hooks, Router, Axios), JavaScript, HTML/CSS, i18next.
- **Backend** — Node.js, Express, MongoDB (Mongoose), MySQL, REST APIs.
- **AI / Agents** — Gemini and Vertex AI, Claude (CLI and SDK), LLM integration in product, prompt design, agent orchestration.
- **Python** — Typer, httpx, pytest, mpyy, scraping. Intermediate level.
- **Security / Auth** — JWT, bcrypt, HttpOnly cookies, session management.
- **DevOps / Systems** — Git, GitHub Actions (CI), Bash, SSH, Ubuntu Server, Nginx, Apache2, Plesk, DNS, Vercel.
- **Web at scale** — WordPress, WP-CLI, hosting migrations, Lighthouse and Core Web Vitals.

FEATURED PROJECTS

Strev — MERN fitness SaaS · AI · Private beta

121 endpoints across 26 modules and 837 passing tests. Cookie auth, payments, gamification and exercise-technique video analysis with Gemini, on Vertex AI in production. *Closed source; demo on request.*

SaveMyMoneyNow — MERN fullstack expense analyser · github.com/EIRaxy/SaveMyMoneyNow

Turns Excel bank statements —every bank exports a different shape— into an expense dashboard. Import wizard that detects the header row and maps columns, rule-based categorisation and duplicate resolution before anything is written to MongoDB. 21 endpoints and 113 test cases. React 18 · Node · MongoDB Atlas.

Atalaya — AI Python CLI · job aggregator · github.com/EIRaxy/atalaya-cli

Python CLI (bhound) that calls Claude through the Claude Code CLI, with no API cost. Aggregates remote dev offers from eight job boards (Aug 2026), scores each against a configurable profile and drafts tailored cover letters. 174 passing tests and mpyy in strict mode. Open source MIT.

WordPress automation in production · Internal tooling

Python and Bash tooling to operate WordPress sites in production: audits, post-deploy verification and migrations between providers. What used to be done site by site now runs in a single pass. *Internal code.*

EXPERIENCE

Full Stack Developer · Web infrastructure automation · Anuubis Solutions — Remote 2026 – present

- I run a fleet of **close to 1,000 sites across 8 servers**: deploys, migrations between hosting providers, audits and production incident response.
- I replace manual work with **Python and Bash** scripts (fleet sweeps, SEO and performance audits, post-deploy verification), turning per-site chores into runs across the whole fleet.
- I diagnose production outages end to end: fatal plugin errors, downed vhosts, mail delivery, DNS and certificates.

- I measure performance with **Lighthouse and Core Web Vitals** (LCP, CLS) and hand clients reports with the numbers.
- I manage domains and DNS through registrar APIs, along with the mail migrations that come with every provider change.

IT Support Technician · Work placement · Impulso Sistemas, Coop. — Villena, Spain

2024

- On-site and remote incident resolution (ticket + phone), Office / Outlook environment.
- Workstation setup and configuration, disk cloning, corporate account management.

EDUCATION

Higher Vocational Training in Web Development (DAW) · IES Hermanos Amorós — Villena

2024 – 2026

Vocational Training in IT Systems and Networks (SMR) · IES Hermanos Amorós — Villena

2022 – 2024

LANGUAGES

- **Spanish** — Native.
- **Valencian** — Native.
- **English** — Intermediate (writing, reading, speaking). Comfortable with technical documentation.

WHAT I'M LOOKING FOR

A remote Full Stack role (MERN or an adjacent stack) at a Spanish or European startup, ideally with an AI component. I come from running infrastructure at scale and I want to put that into product.
